Name: Ke Ma

ID: 26701531

January 22, 2019:

Met with other documenters. We discussed the work distributions and my duty is writing the purpose of our first requirement document. Also learnt some basic instructions of using LaTeX. Created my GitHub account and joined our group project.

January 23, 2019:

Worked on the purpose part and read the sample requirement document on the course website. Attended group meeting and finished up our first half part of our documentation.

January 30, 2019:

Attended group meeting at 20:30. We discussed the form of the second half of the document. Talked with coders, they explained the definition of all source code files. Created the table of content of my part, the MVC architecture. Discussed with Robert and we split the work of MVC.

February 3, 2019:

Started working on MVC architecture documentation for our project. First browsed into our source code on GitHub, understood their usage and functionality. I focused on Model part, which includes game object models. Used real-world concept, described the use of each object as the preface. Finally, built tables using excel to describe each class in detail.

February 5, 2019:

Attended extra group meeting, coders modified their code because some bugs occur, and after they explained the changes to documenters. Therefore, I changed part of my Model description. After everyone finished their work, merged all documents and converted to PDF using LaTeX.
