# 1 Introduction

This document describes the testing procedures planned and executed on the Codenames project by team *PJA* and their results. The tests described have been carefully planned in the early phases of development (iteration 1) and have been gradually written and executed as the project neared completion and the necessary portions of code were written.

## 2 Test Plan

The Test Plan is split into 3 sections, System Level tests, Subsystem Level tests, and Unit Tests. Each of these sections represent a level of integration of the program and have been scheduled in order of integration level, namely Unit tests, Subsystem tests and finally System tests. Some test were not implemented for in the scope of the project like Usability testing, Coverage/White Box test, Performance test and Robustness testing.

**System Level:** Tests the integration and cohesion of all subsystems to form the finished project. This section also includes usability tests which tests if our program can be interacted with as the requirements specify and make sure said interactions produce the correct output efficiently. These tests are of utmost importance as they regulate whether the program functions according to specification and as such were the first to be conceived yet the last to be executed since all subsystems had to be complete and operational prior. Test execution took place in iteration 3 of development and consist of running the program and testing different situations and user interactions, such as card selection and appropriate reactions based on strategy, control button reactions.

**Subsystem Level:** Tests the cooperation between low level units to form a subsystem, which in turn performs a major and complex operation for the system as a whole. Such operation include use of different strategies, creation of the program's internal model and controller interaction with model. These tests are designed to ensure that subsystems perform their designated task correctly in preparation for system wide testing. This level of testing was done by using the Facade testing pattern providing a sandbox to test components together. Such tests were planned after the system tests as per the white to black box testing scheme and executed in iteration 2 of development due to the requirement of functioning units.

**Unit Test:** Tests the lowest level functions of each Unit of code, or class within the code, which make up the components of a subsystem. This level of testing is necessarily designed and executed very early in development (iteration 1) to alleviate concerns of flaws and/or bugs prior to subsystem testing and full blown system testing. It is important to note that not all classes have been thoroughly tested, only important data classes

and linking classes within the model and control portions of the program.

## **2.1 System Level Test Cases**

### **Test Case 1: Player Card Selection**

#### **Purpose**

Tests the ability for a user to select a card on their turn

#### **Input Specification**

Create a new game with a User and an AI (Random or Sequential). If it is an AI start, then press Next Move Control Button until it is User's turn. Click on a card.

#### **Expected Output**

*Case 1:* User Team Card

It is the User Team's turn to play again.

*Case 2:* AI Team Card or Bystander

It is the AI's turn to play.

*Case 3:* Assassine Card

The game ends.

*Case 4:* Selected Card

Nothing happens.

#### **Traces to Use Cases**

The User must be able to play the game as an Operative.

### **Test Case 2: Next Move Control Button**

#### **Purpose**

Tests the ability of the AI to make a move.

#### **Input Specification**

Create a AI vs. AI new game (Random/Sequential). If Red start, press Next Move until Blue team turn. Press Next Move control button.

#### **Expected Output**

*Case 1:* Blue AI 1 Team Card

It is the AI 1's turn to play again.

*Case 2:* AI Team Card or Bystander

It is the AI 2's turn to play.

*Case 3:* Assassin Card

The game ends.

#### **Traces to Use Cases**

The User can play against AI with intelligent Random or Iterative strategies.

### **Test Case 3: Undo Control Button**

#### **Purpose**

Tests the ability of the user to undo any number of moves.

#### **Input Specification**

Create a new game. In any order, press Next Move control button twice and select 2 cards. Press Undo control button.

#### **Expected Output**

The game state is exactly what it was before playing the 4th move.

#### **Traces to Use Cases**

Part of the Undo/Redo system

### **Test Case 4: Redo Control Button**

#### **Purpose**

Tests the ability of the user to redo moves, if there are any.

#### **Input Specification**

Create a new game. In any order, press Next Move control button twice and select 2 cards. Press Undo control button twice. Press Redo control button.

#### **Expected Output**

The game state is exactly what it was before playing the 4th move.

#### **Traces to Use Cases**

Part of the Undo/Redo system.

### **Test Case 5: Keycard Control Button**

#### **Purpose**

Tests the ability of the user to see the keycard.

#### **Input Specification**

Start a new game. Press the Keycard control button. Find the Black assassin card on Keycard screen. Close Keycard screen. Press the card where the assassin should be according to the keycard.

#### **Expected Output**

Assasin card should be flipped and game should end.

#### **Traces to Use Cases**

User should be able to see the Keycard.

### **Test Case 6: Quit Control Button**

#### **Purpose**

Tests whether the game can be closed.

#### **Input Specification**

Start a new game. Press Close control button.

#### **Expected Output**

Program should end.

#### **Traces to Use Cases**

Easily close the program.

### **Test Case 7: New Game Control Button**

#### **Purpose**

Tests the ability of the user to start a new game.

#### **Input Specification**

Start application, press New Game control button. Select AI types (Sequential/Random). Press Continue button.

#### **Expected Output**

Game should be different.

#### **Traces to Use Cases**

Create a new game.

## **2.2 Subsystem Level Test Cases**

### **Subsystem 1: Hint Subsystem**

#### **Purpose**

Tests Spymaster hint selection and AI word selection based on given hint.

#### **Input Specification**

Using Appendix 2, imported as a list of Cards specifically designed to test hint selection for spymaster and plausible card selection list for AI. Test can be found in *HintsTestFacade.java*.

#### **Expected Output**

Spymaster Selected hint "2" and AI selects Card "1".

#### **Traces to Use Cases**

AI use of hints to make intelligent decisions.

## Subsystem 2: Model Creation Subsystem

### Purpose

Tests the creation of the model and all data classes. Making sure the GameBoard is generated correctly.

### Input Specification

Generates a GameBoard from predetermined set of cards found in Appendix 3.

### Expected Output

Card list matching Appendix 3 and Card at index 15 should be Card[15]: RED - Word: Beef - Revealed: false and starting team is BLUE.

### Traces to Use Cases

Insures the model properly represents the game so the AI can use it properly and View can use it to display.

## Subsystem 3: Inbox Subsystem

### Purpose

Tests if Message and Inbox linking components work together correctly.

### Input Specification

Test can be found in *MessageToInboxFacade.java*

### Expected Output

Message displaying each message type.

### Traces to Use Cases

Ensures proper communication between each MVC part.

## 2.3 Unit Test cases

### DatabaseExtractor unit test

<b>Test name</b>	getTextFromDatabase()
<b>Purpose</b>	Make sure that the class is able to enter the database and extract info from it
<b>test result</b>	Pass

<b>Test name</b>	takeAllLine()
<b>Purpose</b>	Make sure that it take all the hundred words from the data base
<b>test result</b>	Pass

<b>Test name</b>	noNull()
<b>Purpose</b>	Make sure that there is no duplicate word in the database
<b>test result</b>	Pass

#### Inbox unit test

<b>Test name</b>	getMessage()
<b>Purpose</b>	Make sure that getter and that the function sendMessage() work Properly
<b>test result</b>	Pass .

#### KeyCard

<b>Test name</b>	rightNumberOfBlueCard()
<b>Purpose</b>	Make sure that the number of blue card is good
<b>test result</b>	Pass

<b>Test name</b>	rightNumberOfRedCard()
<b>Purpose</b>	Make sure that the number of red card is good
<b>test result</b>	Pass

<b>Test name</b>	rightNumberOfBlackCard()
<b>Purpose</b>	Make sure that the number of black card is good
<b>test result</b>	Pass

<b>Test name</b>	rightNumberOfyellowCard()
<b>Purpose</b>	Make sure that the number of yellow card is good
<b>test result</b>	Pass

#### LogMessage

<b>Test name</b>	getType()
<b>Purpose</b>	Make sure that it's able to retrieve the type data without any problem
<b>test result</b>	Pass

<b>Test name</b>	getCardAffected()
<b>Purpose</b>	Make sure that it's able to retrieve the Card Affected data without any problem
<b>test result</b>	Pass

<b>Test name</b>	getHint()
<b>Purpose</b>	Make sure that it's able to retrieve the right hint Affected data without any problem
<b>test result</b>	Pass

## Message

<b>Test name</b>	getMessageType()
<b>Purpose</b>	Make sure that it's able to retrieve the message type without any problem
<b>test result</b>	Pass

<b>Test name</b>	getCardAffected()
<b>Purpose</b>	Make sure that it's able to retrieve the Affected card without any problem
<b>test result</b>	Pass

## Outbox

<b>Test name</b>	getReply()
<b>Purpose</b>	Make sure that it's able to retrieve the Reply without any problem
<b>test result</b>	Pass

<b>Test name</b>	getHint()
<b>Purpose</b>	Make sure that it's able to retrieve the hints without any problem
<b>test result</b>	Pass

## Reply

<b>Test name</b>	getReplyType()
<b>Purpose</b>	Make sure that it's able to retrieve the Reply type without any problem
<b>test result</b>	Pass

<b>Test name</b>	getCardAffected()
<b>Purpose</b>	Make sure that it's able to retrieve the card without any problem
<b>test result</b>	Pass

<b>Test name</b>	getCardType()
<b>Purpose</b>	Make sure that it's able to retrieve the card type without any problem
<b>test result</b>	Pass

<b>Test name</b>	getBlueScore()
<b>Purpose</b>	being able to retrieve the blue score
<b>test result</b>	Pass

## 3 Test Results

### 3.1 System Tests

#### Test Case 1: Player Moves

Figure 1: Starting board

Figure 2: Blue picks blue card, score updates, same turn

Figure 3: Blue picks blue card, score updates, same turn

Figure 4: Blue picks yellow card, red turn

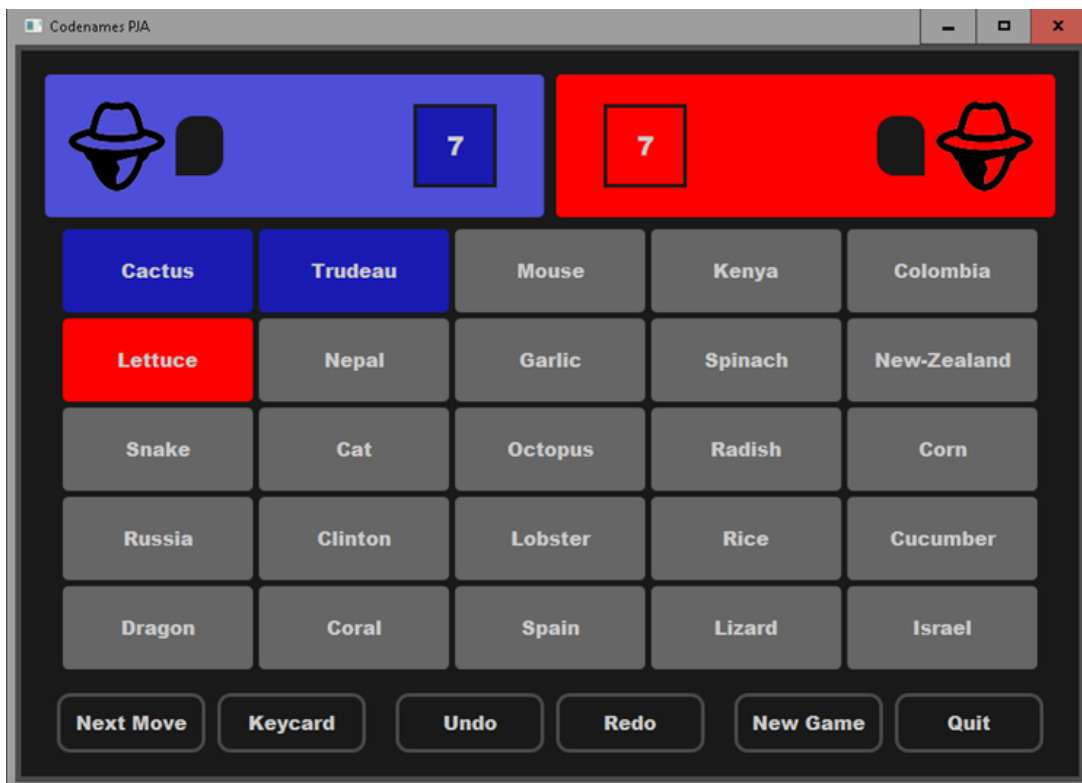

Figure 5: Red picks red card, score update, same turn

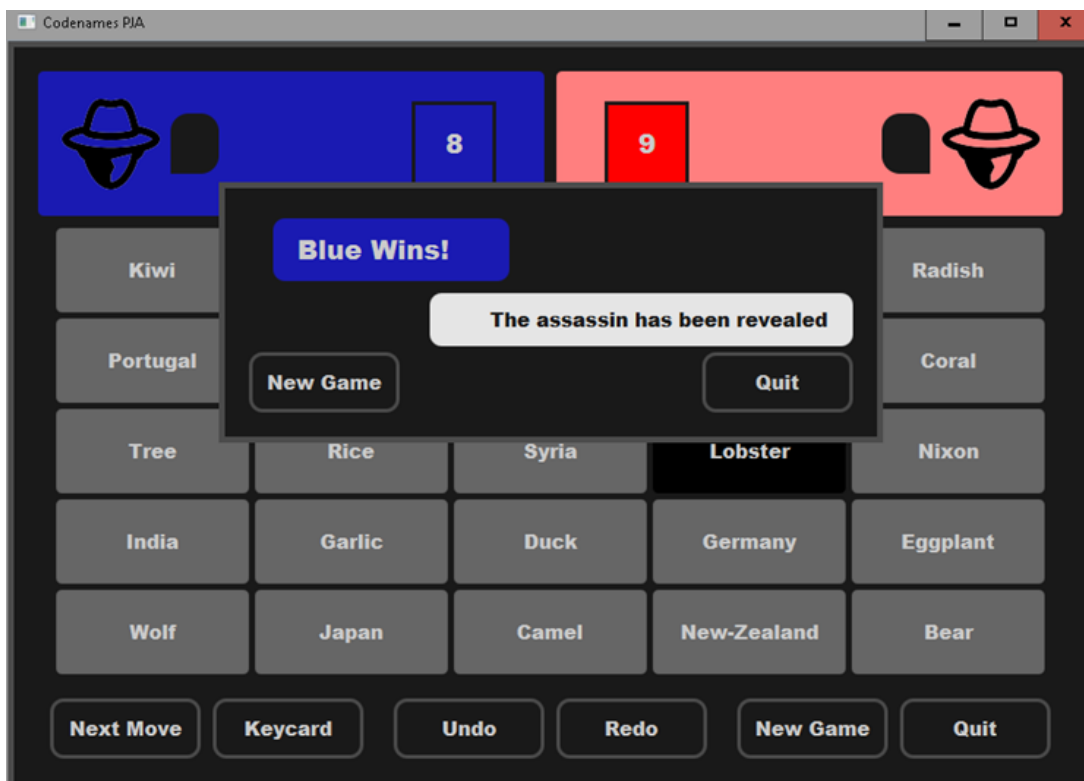

Figure 6: Red picks black card, blue wins

## Test Case 2: Next Move

Figure 7: Blue picks blue card, same turn

Figure 8: Blue picks yellow card, red turn

Figure 9: Red picks black card, blue wins

### Test Case 3: Undo

Figure 10: Before pressing Undo

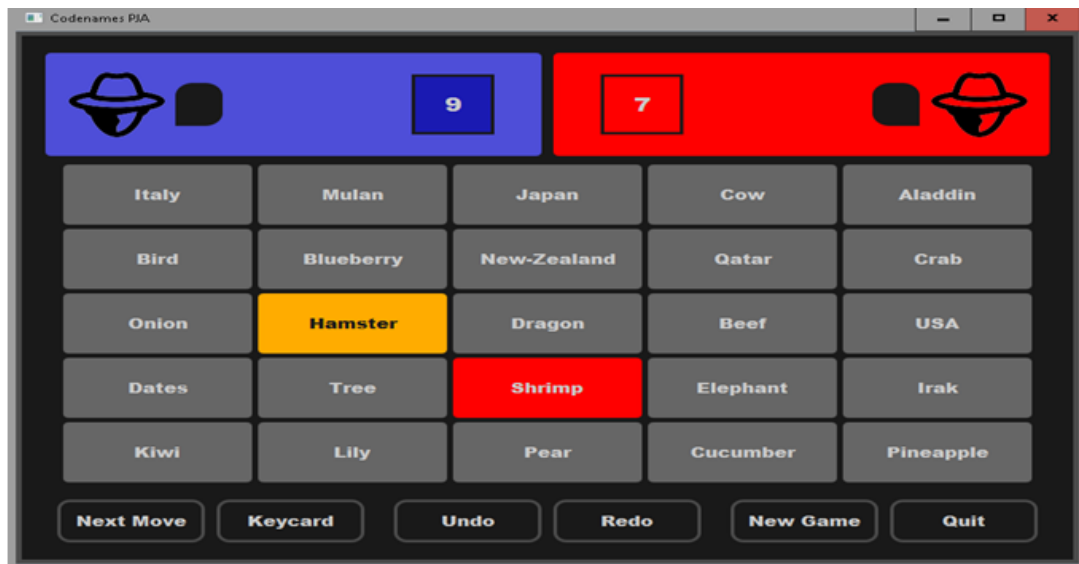

Figure 11: After pressing Undo

## Test Case 4: Redo

Figure 12: Before pressing Redo

Figure 13: After pressing Redo

## Test Case 5: New Game

Figure 14: New Game prompt

Figure 15: After hitting confirm

## Test Case 6: KeyCard

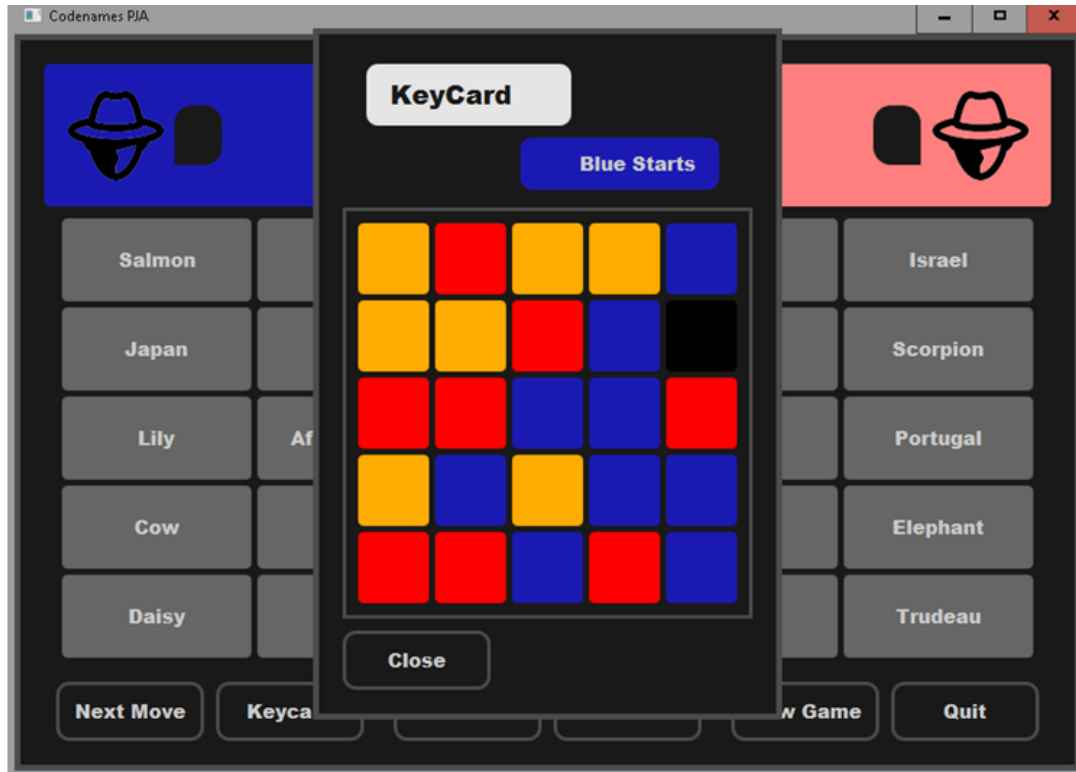

Figure 16: KeyCard popup

## 3.2 Subsystem Tests

### Hint Subsystem:

Output:

*AI hint testing...*

*Expected hint:2, expected word:1*

*Picking hint... AI picks hint: 2*

*Picking word... AI picks word: 1*

Result: Pass

### Model Creation Subsystem:

Output:

*Testing Game Generation...*

*Card List:*

*Card[0]: YELLOW - Word: Radish - Revealed: false*

*Card[1]: BLUE - Word: Tomato - Revealed: false*

*Card[2]: BLACK - Word: Giraffe - Revealed: false*

*Card[3]: BLUE - Word: Germany - Revealed: false*

*Card[4]: RED - Word: Ginger - Revealed: false*

*Card[5]: RED - Word: Daisy - Revealed: false*

*Card[6]: YELLOW - Word: Calamari - Revealed: false*

*Card[7]: RED - Word: JFK - Revealed: false*

*Card[8]: BLUE - Word: Russia - Revealed: false*

*Card[9]: BLUE - Word: Haiti - Revealed: false*

*Card[10]: BLUE - Word: Bird - Revealed: false*

*Card[11]: BLUE - Word: Israel - Revealed: false*

*Card[12]: YELLOW - Word: Snake - Revealed: false*

*Card[13]: RED - Word: Peru - Revealed: false*

*Card[14]: RED - Word: Shrimp - Revealed: false*

*Card[15]: RED - Word: Celery - Revealed: false*

*Card[16]: BLUE - Word: Portugal - Revealed: false*

*Card[17]: YELLOW - Word: Tunisia - Revealed: false*

*Card[18]: YELLOW - Word: Irak - Revealed: false*

*Card[19]: YELLOW - Word: Mulan - Revealed: false*

*Card[20]: BLUE - Word: Brazil - Revealed: false*

*Card[21]: YELLOW - Word: India - Revealed: false*

*Card[22]: RED - Word: Wolf - Revealed: false*  
*Card[23]: RED - Word: Dragon - Revealed: false*  
*Card[24]: BLUE - Word: Potato - Revealed: false*

*Getting Card 15 information:*  
*Card[15]: RED - Word: Celery - Revealed: false*

*Starting Turn is Blue: true*  
Result: Pass

### **Inbox Subsystem:**

Output

Testing sending a message to the inbox...

*Test1: Messagedetail: NEW<sub>G</sub>AME<sub>BR</sub>ANDOM<sub>RR</sub>ANDOMaffectingoncard#1*  
*Test2: Messagedetail: NEW<sub>G</sub>AME<sub>BR</sub>ANDOM<sub>RN</sub>EXTaffectingoncard#2*  
*Test3: Messagedetail: NEW<sub>G</sub>AME<sub>BN</sub>EXT<sub>RR</sub>ANDOMaffectingoncard#3*  
*Test4: Messagedetail: NEW<sub>G</sub>AME<sub>BN</sub>EXT<sub>RN</sub>EXTaffectingoncard#4*  
*Test5: Messagedetail: NEXTaffectingoncard#5*  
*Test6: Messagedetail: UNDOaffectingoncard#6*  
*Test7: Messagedetail: REDOaffectingoncard#7*  
*Test8: Messagedetail: SELECTaffectingoncard#8*

Result: Pass

## **3.3 Unit Tests**

### **DatabaseExtractor Unit**

getTextFromDatabase(): Pass  
takeAllLine(): Pass  
noNull(): Pass

### **Inbox Unit**

getMessage(): Pass

## **KeyCard Unit**

rightNumberOfBlueCard(): Pass  
rightNumberOfRedCard(): Pass  
rightNumberOfBlackCard(): Pass  
rightNumberOfYellowCard(): Pass

## **LogMessage Unit**

getType(): Pass  
getCardAffected(): Pass  
getHint(): Pass

## **Message Unit**

getMessageType(): Pass  
getCardAffected(): Pass

## **Outbox Unit**

getReply(): Pass  
getHint(): Pass

## **Reply Unit**

getReplyType(): Pass  
getCardAffected(): Pass  
getCardType(): Pass  
getBlueScore(): Pass

# 5 References

## 5.1 Description of Input Files

### Appendix 1: CodenamesDatabase.txt

This input file is filled with the words used inside the program and has a format:

$$\{\text{word: } word1 \text{ hints: } hint11, hint12, hint13, \dots \}$$

{word: *word2* hints: *hint21*, *hint22*, *hint23*, ... }  
 ...

The file contains 100 words where each word has at least 3 hints and each hint relates to a minimum of 2 words. Hints are not considered words, though a word can be used as a hint.

The CodenamesDatabase.txt can be found at:

COMP354PJA/client/src/CodenameDatabase.txt

## Appendix 2: Hint Test Card List

Though this is hardcoded in the HintTestFacade.java file, it is required to properly test AI and Spymaster use of hints.

{word: 0 hints: 1 }  
 {word: 1 hints: 1, 2 }  
 {word: 2 hints: 1, 3 }  
 {word: 3 hints: 1, 2, 3 }  
 {word: 4 hints: 2, 4 }  
 {word: 5 hints: 3, 2 }

## Appendix 3: Game Generation Card List

A list of cards used to test game generation

Card[0]: RED - Word: Beet - Revealed: false  
 Card[1]: BLUE - Word: Duck - Revealed: false  
 Card[2]: BLUE - Word: Germany - Revealed: false  
 Card[3]: RED - Word: Pig - Revealed: false  
 Card[4]: BLUE - Word: Tunisia - Revealed: false  
 Card[5]: BLUE - Word: Onion - Revealed: false  
 Card[6]: BLACK - Word: Apple - Revealed: false  
 Card[7]: BLUE - Word: Cucumber - Revealed: false  
 Card[8]: BLUE - Word: Irak - Revealed: false  
 Card[9]: YELLOW - Word: Radish - Revealed: false  
 Card[10]: YELLOW - Word: Russia - Revealed: false  
 Card[11]: BLUE - Word: Australia - Revealed: false  
 Card[12]: RED - Word: Rice - Revealed: false  
 Card[13]: RED - Word: France - Revealed: false  
 Card[14]: BLUE - Word: Lobster - Revealed: false  
 Card[15]: RED - Word: Beef - Revealed: false

Card[16]: BLUE - Word: Crab - Revealed: false  
Card[17]: YELLOW - Word: Eggplant - Revealed: false  
Card[18]: RED - Word: Calamari - Revealed: false  
Card[19]: RED - Word: Mushroom - Revealed: false  
Card[20]: YELLOW - Word: Kiwi - Revealed: false  
Card[21]: YELLOW - Word: Ginger - Revealed: false  
Card[22]: RED - Word: Bear - Revealed: false  
Card[23]: YELLOW - Word: Cat - Revealed: false  
Card[24]: YELLOW - Word: New-Zealand - Revealed: false

#### **Appendix 4: Results for System Tests**

Because of issues using latex with images, the System tests have been included as a .docx document, which can be found:

COMP354PJA/docs/SystemTest.docx
